

NOSHIT Coin Whitepaper: The Genesis Launch Vehicle

Version 1.2 (Final Launch Strategy) | Date: December 2025

1. Introduction

NOSHIT Coin (\$NOSHIT) is the foundational launch project for the GENIE Launchpad Ecosystem. Its primary function is to serve as the high-velocity, community-driven vehicle required to achieve the launch criteria for the main platform token, \$GENIE. \$NOSHIT is designed with aggressive tokenomics to ensure rapid adoption, strong liquidity, and maximum funding for the GENIE ecosystem's establishment.

2. Mission and Purpose

The sole mission of \$NOSHIT is to successfully achieve the mandatory milestones for the \$GENIE launch:

- 1. Reach a minimum market capitalization of **\$1 million USD**.
- 2. Maintain a minimum of **100 holders** for one continuous week.

Upon meeting either of these two criteria, the \$GENIE token launch will be initiated.

3. Launch Strategy: Community Governance and Security

The community will vote on X to determine the final launch method, which dictates the token's initial fee structure.

A. Community Launch Method Poll

Community members will vote between two options on X. This mechanism ensures early involvement and trust in the chosen tokenomics:

Option	Launch Mechanism	Fee Structure	Rationale
Option 1: Presale (I would invest in such a presale)	Presale managed by GENIE smart contract, followed by DEX launch.	Asymmetric Fees: 0.3% Buy / 3.6% Sell	Incentivizes holding, provides higher funding for platform growth.
Option 2: Direct Launch (Launch directly on Jupiter with no presale)	Direct launch on a bonding curve (e.g., Jupiter).	Symmetric Fees: 1.0% Buy / 1.0% Sell	Simpler launch, lower fees overall.

Condition: If a minimum of **100 votes** select the presale option, the Asymmetric Fee model will proceed.

B. Presale and Vesting (Smart Contract Enforced)

If the Presale option is selected, the following security measures are mandatory:

- **Mandatory 10-Week Vesting:** All tokens purchased in the presale will be subject to the **10-Week Weekly Vesting Protocol**. Only 10% of the purchased tokens will be released weekly over 10 consecutive weeks.
- **Security Limits:** Presale allocation is capped at 6% of the total supply, with a maximum contribution limit of the equivalent of 0.3 SOL per wallet.

C. Anti-Rug Guardrails

- **5% Creator Fees:** As the platform creator is launching \$NOSHIT, a minimal amount of the tax revenue from NOSHIT transactions is allocated to a creator fund.
- **Diluted Ownership:** The total community Airdrop Pool is set to be **3x-4x larger** than the creator's total token allocation.

4. Tokenomics and Fee Structure

The fee structure applied will depend on the community's vote. The distribution percentages outlined below apply to the **Total Tax** collected, regardless of the final rate (2% for Symmetric, 3.9% for Asymmetric).

Allocation Target	Percentage of Total Tax	Purpose
GENIE Fund (Platform)	25%	Primary funding source for the GENIE platform (CEX fees for \$GENIE, infrastructure). At least 50% of this must be used for \$GENIE Buy-Back and Burn.
Influencers/Rewards	30%	Dedicated budget for community engagement and rewarding active members through the Community Builder Quest .
Token Buy Back/Burn	25%	Direct deflationary pressure on \$NOSHIT coin, permanently reducing its supply.
Marketing Fund	15%	Budget for the dedicated Marketing Manager's compensation and platform-wide promotional activities.
Creator Compensation	5%	All revenue except a minimal amount is redirected to the community and platform development.

5. Community Engagement: The Taskon Campaign

The **Influencers/Rewards (30%)** pool funds the **GENIE Community Builder Quest**, a points-based campaign hosted on Taskon. This campaign incentivizes verifiable actions—such as following, subscribing, voting on the launch method, and presale participation—with rewards distributed on a pro-rata basis based on total points earned.
